As easy as a Single Shot Technique

Echogenicity of cannula and catheter
• US visibility is increased due to the Self-Priming System

Electrical stimulation
• Optionally be used alone or in combination with ultrasound (dual guidance)

Soft catheter tip
• For more comfort and safety

Catheter over Needle Technique
• Reduces the risk of leakage and dislocation to a minimum

Double layered design of E-Catheter and indwelling cannula
• Enables an unhindered flow of the anaesthetic

E-Catheter with lateral and central opening
• Ensures a continuous flow of the anaesthetic

E-Catheter with integrated injection tube and lock Connection
• Replaces the Clamping Adapter
